Description:

An empty scenario based in a location that will first need to be loaded if the scenario you wish to play recommends it. This should help load the scenario if it is a more intensive one.

How to use a preload scenario:

- 1. After loading Train Simulator, click on the 'Drive' option.*
- 2. Click on the 'Standard' Scenario tab.*
- 3. Use the Scenario list on the right-hand side to scroll and locate the correct route scenarios, DO NOT click the 'Select Route' thumbnail.*
- 4. You should see six 'A PRELOAD' named scenarios, choose and load the one that you need (location).*
- 5. Once it has loaded, fly a few miles (roughly) in each two directions from your starting point.*
- 6. When you are happy you have done that, exit that scenario and load the scenario that you planned without exiting the sim.*

These scenarios and route combination have proved rather temperamental.

Despite a lot of effort to update these packs to fully use the newer versions of DLC, it has proved impossible. This means that unfortunately the pack still requires a few older and no longer available items which we can only apologise for. We have however made sure that the player gets to drive the newer versions.
